Sehr geehrter Herr Newsletter

**It's fun to create something, which no one has seen.**  
(Roland Emmerich \*1955)

We have taken this quotation to heart. We thought about how we as a Swiss manufacturer can produce Tyvek® lids efficiently and under clean room conditions.

**The solution lies in the technology** – a digital printer with integrated stamping, which we have developed ourselves. This one machine prints and stamps the lids in a single work process. We do not work from formats but rather from the roll, enabling us to save expensive raw material.

*Digital printer with integrated stamping*

*Tyvek® roll and printed lids*

#### Possible applications:

- |                               |   |
|-------------------------------|---|
| • <b>unprinted lids:</b>      | Stamping from the roll into stamped lids                    |
| • <b>Roll printing</b>        | Printing from roll to roll                                  |
| • <b>printed Tyvek® lids:</b> | Printing and stamping from the roll into the shape required |

#### Advantages:

- Saves expensive raw material through better use of material
- Lower initial costs (no printing plates)
- Smaller print runs, continuous numbering and images are feasible
- Rapid change of format; even with stamped cut-outs

Are you curious now? Visit our homepage ([www.medipack.ch](http://www.medipack.ch)) or contact us. We would be delighted to send you a print sample or provide you with a quotation.

**Furthermore:**

From **13 - 16 November 2017** you can find us at [Compamed](#) in Düsseldorf, **Hall 8b / Stand 8bJ01**. Come and visit us - we look forward to seeing you!

**Kind regards**

Reto Artusi
